```python
# Create empty list
my_list = []

# Write your code here
for i in range(1, 10):
    my_list.append(i)

# Print original list
print("Original list:", my_list)

# Print length of list
print("Length of list:", len(my_list))

# Remove duplicates
y = 0
for x in range(len(my_list)):
    if x < len(my_list):
        if my_list[x] == my_list[y] and x != y:
            del my_list[x]
        else:
            y = y + 1
    else:
        break

# Print final list
print("The list with unique elements only.")
print(my_list)
```
